Proccess Details

The peaches are washed, pitted, peeled and halved. The halves are inspected, passed through a metal detector and filled automatically into a sterilised can. The hot syrup is added, the filled cans are individually weight checked and corrected where necessary. The cans are then seamed, washed and processed in a continuous cooker at 100C, to achieve the equivalent can centre temperature of 85C for 1 minute. After processing, the cans are cooled to 35 – 40C in chlorinated water. The cooled cans are date stamped and incubated for 10 days. The cans are then checked for damage, labelled and packed into cartons.
