Marketing text

Fine, nutty delicacy. The small, green-speckled lentils are characterized by their nutty-savory taste. The waxy lentils hold their shape when cooked. Cultivating domestic protein crops such as lentils, beans or lupines contributes to a more versatile crop rotation and helps to conserve soil health. Legumes can be cultivated without nitrogen fertilizers. This reduces soil pollution and at the same time, legumes also enhance soil fertility, as they can absorb atmospheric nitrogen in their roots. In addition, legumes are an important nutritional basis for pollinators such as bees.
